HF21 - The DSP reads a voltage from the power pcb to determine the correct Drive kW size. If the voltage is different to an expected value, the Drive will trip. Commander SK Trip and Status Diagnostic Codes The Commander SK is an open loop vector AC variable speed inverter drive used to control the speed of an AC induction motor. The drive uses an open loop

vector control strategy to maintain almost constant flux in the motor by dynamically adjusting the motor voltage according to the load on the motor. The AC supply is rectified through a bridge rectifier and then smoothed across high voltage capacitors to produce a constant voltage DC bus.
