Distributed Operating System Tutorial: Types, Examples ... A distributed operating system is system software over a collection of independent, networked, communicating, and physically

separate computational nodes.

They handle jobs which are serviced by multiple CPUs. Each individual node holds a specific software subset of the global aggregate operating system. Each subset is a composite of two distinct service provisioners. The first is a ubiquitous minimal kernel, or microkernel, that directly controls that node's hardware. Second is a higher-level co Distributed operating system -
