The timing of biological events (e.g. spring bloom, entry/exit from diapause, and fish spawning) is susceptible to environmental change. Many species can adapt their feeding modes and diets, but changes in mortality imposed by heavy fishing can disrupt biological systems, making them increasingly vulnerable to perturbations. Dynamics of marine ecosystems: ecological processes ... Steele (1998) also stated that the basic assumption in biological oceanography is that physical forcing at a wide range of space and time scales determines most of the dynamics of marine populations. Evidence for this assumption has been the theme of the two previous editions of this book. However, recent develop- DYNAMICS OF MARINE ECOSYSTEMS understand talks given by oceanographic modelers, Dynamics of Marine Ecosystems is the book for you! The perspective comes entirely from the resource-driven angle—that is, not much about effects of predation on trophic structure, and the “biology” does DYNAMICS OF MARINE ECOSYSTEMS: BIOLOGICAL-PHYSICAL ... Dynamics of Marine Ecosystems considers the influence of physical forcing on biological processes in a wide range of marine habitats including coastal estuaries, shelf-break fronts, major ocean gyres, coral reefs, coastal upwelling areas, and the equatorial upwelling system.
