## orders. Electronic Health Records:

Understanding and Using ... There is an important distinction between an EHR and an electronic medical record (EMR): An EMR is the record that is created and maintained in a single provider's office. The EHR is a comprehensive patient history; it can be based on a doctor's EMRs, but it is the EHR that travels with the patient to all providers involved in that patient's care and that is used by multiple health care organizations. Understanding Electronic Health Records | The Daily Dose ... Understanding electronic health records and third-party application databases. Choose the proper data model prior to a database purchase Understanding electronic health records and third-party ... An

electronic health record (EHR) is a digital version of a patient's paper chart. EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users. What is an electronic health record (EHR)? | HealthIT.gov In medical offices the electronic health record is a longitudinal record encompassing numerous encounters over an extended period of time. In contrast, inpatient records Important Information about the Exercises in This Chapter The exercises thus far have permitted you to skip setting the encounter date and time. and Cybersecurity. To support

patient care, providers store electronic Protected Health Information (ePHI) in a variety of electronic systems, not just Electronic Health Records (EHRs). Knowing this, providers must remember that all electronic systems are vulnerable to cyber-attacks and must consider in their security efforts all of their systems and technologies that maintain ePHI.
