Bakkafrost - Fish feed - Faroe Islands salmon The conceptual basis of controlled eutrophication of fishponds using poultry manure for the production of herbivorous fish is compared to feeding of abattoir wastes to carnivorous fish. A comparison of poultry production systems in terms of their potential for integration with fish culture is made; the modern feedlot is compared and

contrasted with traditional systems. Poultry and Fish Production Fish cultured in an integrated farming system with livestock (especially duck; Edwards, 1986) benefit from a significant amount of the nutrition derived from natural food, which develops in the pond due to the fertilization by organic manures. This suggests the important role of pelagic algal-based food web which cultivates in fish biomass.
