How To Know The Mosses Mosses are distinctive from flowering plants because they produce spores. They have stems and leaves but not true roots. They are reliant on damp conditions for reproduction because the male cells need to move via a film of water to reach the female cells for fertilisation. Types of Moss: Everything You Need to Know - Woodland Trust What is moss? Mosses belong to the group of plants called bryophytes, which consists of mosses, liverworts and hornworts. Bryophytes are the most primitive group of land plants, and arrived on land around 500 million years ago. They are located at the root of the land plant tree and display many ancient plant features. Amazing moss and how to identify it « Botany One Mosses are a phylum of non-vascular plants. They produce spores for reproduction instead of seeds and don't grow flowers, wood or true roots. Instead of roots, all species of moss have rhizoids. The mosses sit within a division of plants called the Bryophyta under the sub-division Musci.
