The middle layer of the tooth is composed of dentine, which is less hard than enamel and similar in composition to bone.

The Interrelationship Of Tooth Composition Body Fluids Diet ... The human teeth function to mechanically break down items of food by cutting and crushing them in preparation for swallowing and digesting. Humans have four types of teeth: incisors, canines, premolars, and molars, which each have a specific function. The incisors cut the food, the canines tear the food and the molars and premolars crush the food. The roots of teeth are embedded in the maxilla or the mandible and are covered by gums. Teeth are made of multiple tissues of varying density and hard Human tooth - Wikipedia Teeth are one of the strongest parts of the human body. It is mainly composed of proteins (collagen) and minerals (calcium).

Apart from the digestion, teeth also play an important role in our speech. An adult will have 32 teeth, including the Wisdom teeth. Types Of Teeth- Types of Teeth In Humans, Diagram and ...
