Vesicle Abstract During vertebrate development, brain patterning and

head morphogenesis are tightly coordinated. In this paper, we study

these processes in the mouse mutant *Fused toes* (*Ft*), which

presents severe head defects at midgestation. The *Ft* line carries a

1.6-Mb deletion on chromosome 8. Defects in brain patterning and

functions in vertebrate development and signaling.

However, little is known about cilia function in brain morphogenesis, a process that is severely affected in human ciliopathies. Here, we study telencephalic morphogenesis in a mouse mutant for the ciliopathy gene *Ftm* (*Rpgrip11*).

Authorama.com features a nice selection of free books written in HTML and XHTML, which basically means that they are in easily readable format. Most books here are featured in English, but there are quite a few German language texts as well. Books are organized alphabetically by the author's last name.
