Multiscale Modeling Of Cancer An Mathematical modeling, analysis and simulation are set to play crucial roles in explaining tumor behavior, and the uncontrolled growth of cancer cells over multiple time and spatial scales. This book, the first to integrate state-of-the-art numerical techniques with experimental data, provides an in-depth assessment of tumor cell modeling at multiple scales. Breast cancer remains the second leading cause of cancer death in women, exceeded only by lung cancer. Specifically, triple-negative breast cancer (TNBC) has the worst prognosis, as it is more invasive and lacks estrogen, progesterone, and HER2 receptors that can be targeted with therapies. Due to the need for effective therapies for this type of breast cancer, it is critical to develop ... Multiscale Modeling of Cancer Multiscale computational models have been used to study the coupled processes involved in tumor cell migration and metastasis, including: 1) invasion of cancer cells into surrounding tissue, 2) intravasation of single cancer cells and cell clusters into the circulation, 3) binding of circulating tumor cells to the microvascular endothelium, 4) extravasation of circulating tumor cells at distant secondary sites in the body, and 5) growth and expansion of metastasized cells . Multiscale modeling has been used to explain the discovery of molecular targets in cancer.^{38,59} Wang et al extensively studied the identification of molecular therapeutic targets of high value via multiscale modeling in combination with

cross-scale agent-based analytical techniques and its associated challenges in terms of data heterogeneity, verification of model parameters, validation of model outputs, and computational complexity of more complicated models. Integrating Multiscale Modeling with Drug Effects for ... On the basis of the processes implicated by frequently mutated genes associated with inflammation and cancer in three organs (stomach, colon, and liver) extracted from the Gene Expression Omnibus, The Cancer Genome Atlas, and Gene Ontology databases, we present a multiscale model of the long-term evolutionary dynamics leading from inflammation to tumorigenesis. Multiscale Modeling of Inflammation-Induced Tumorigenesis ...
