(ordered pairs) is an ordered pair. Sometimes (in other books) they use or other symbols to denote ordered pairs. Section 1: Fundamental Concepts | dbFin Solution: First we will show that an element in an ordered set has at most one immediate successor. Let A be an ordered set and $x \in A$. If x is the largest element of A , then it has no immediate successor. Now suppose instead that x has two immediate successors $y, z \in A$. If we assume $y \neq z$, we may further assume without loss of generality that $y < z$. Solutions 1(C) then there is a neighborhood W of x which is disjoint from $\pi^{-1}(C)$.
Thus The tube lemma says that $\pi^{-1}: X \times Y \rightarrow X$ is closed when Y is compact (so that
 π^{-1} is an example of a perfect map [Ex 26.12]). On the other hand, projection

comment. Section 3: Relations. 1. Define two points and of the plane to be equivalent if . Check that this is an equivalence relation and describe the equivalence classes. Munkres: Chapter 1, Section 3 | jesterpo Solution: Given $x; y \in X [0;1)$ where $x < y$, we have $x = x_0 x_1$ and $y = y_0 y_1$. Since $[0;1)$ is a linear continuum, if $x_0 < y_0$, let $z = \frac{1}{2}(x_0 + y_0)$; if $x_0 = y_0$, let $z = \frac{1}{2}(x_0 + y_1)$. Hence if $z = x_0 z_1$, then $x < z < y$. Now let U be a non-empty subset of $X [0;1)$ that is bounded above. Define $M = \{m \in X [0;1) : m \text{ is an upper bound for } A\}$, which is the set of all upper bounds of A .
