In addition, the potential functional significance for adult neurogenesis in the context of the normal function of the hippocampus will be discussed. In the second part of the talk I will focus on the recent finding that LINE-1 (Long Interspersed Nucleotide Elements-1 or L1) retroelements are active

in somatic neuronal progenitor cells (NPCs) providing an additional mechanism for neuronal diversification. Neural Plasticity and Diversity in the Adult Mammalian Brain Another stem cell that has the definite potential to generate all mature neurons and glial cells is the embryonic stem (ES) cell, which is pluripotent, i.e. giving rise to all somatic cell types, including all neural tissue cells as well as germ cells. A separate chapter will address the ability of ES cells to generate neural cells. Evaluation of neural plasticity in adult stem cells Hello, Sign in. Account & Lists Account Returns & Orders. Neural Plasticity in Adult Somatic Sensory-Motor Systems ... Adult stem cell plasticity, or the ability of somatic stem cells to cross boundaries and differentiate into unrelated cell types, has been a matter of debate in the last decade. Neural-crest-derived stem cells (NCSCs) display a remarkable plasticity during development. Whether adult populations of NCSCs retain this plasticity is largely unknown. Physiological Plasticity of Neural-Crest-Derived Stem ... "Synthesizing current information about sensory-motor plasticity,
