Two pattern recognition techniques based on time series analysis are applied to fiber optic strain gauge data obtained from two different structural conditions of a surface-effect fast patrol boat. The first technique is based on a two-stage time series analysis combining Auto-Regressive (AR) and Auto-Regressive with eXogenous inputs (ARX) prediction models. Structural Health Monitoring Using Statistical Pattern ... Pattern recognition is the automated recognition of patterns and regularities in data. It has applications in statistical data analysis, signal processing, image analysis,

From Wikipedia, the free encyclopedia. Jump to navigation Jump to search. Syntactic pattern recognition or structural pattern recognition is a form of pattern recognition, in which each object can be represented by a variable- cardinality set of symbolic, nominal features. This allows for representing pattern structures, taking into account more complex interrelationships between attributes than is possible in

recognition is straightforward, but may not be ideal for many realistic problems. Patterns that include structural or relational information are difficult to quantify as feature vectors. Syntactic pattern recognition uses this structural information for classification and description. Syntactic Pattern Recognition - Computer Science pattern recognition techniques to locate and characterize the biological structures in a tissue image for tissue quantification. A block diagram of the proposed method is shown in Fig. 4.
