With Petrel Reservoir Engineering 2020, reservoir engineers can generate a simulated production logging tool (PLT), which can be compared against a real PLT taken in a well. This helps them understand the consistency between geological details and production response. Visualize and compare simulation PLTs with observed ones to improve reservoir characterization and produce reliable forecasts ... The Petrel E&P software platform provides a full spectrum of geophysical workflows to solve the most complex structural and stratigraphic challenges—from regional exploration to reservoir development scale. Within a unified multiuser collaboration environment, geoscientists can perform 2D, 3D, and prestack seismic interpretation as well as advanced geophysics, microseismic evaluation, 4D ... Petrel Geophysics - Schlumberger The Petrel E&P software platform provides a full range of tools to solve the most complex structural and stratigraphic challenges—from regional exploration to reservoir development. Within a single environment, geoscientists can perform the key geological workflows from stratigraphic and seismic interpretation through fracture, facies, and geocellular property modeling to history matching ... Petrel Geology & Modeling - Schlumberger The Petrel GeoTesting Global Sensitivity Analysis optimizes test designs by targeting the reservoir feature of interest and quantifying the information achievable by various design options. Uncertainty in the geological model is included during the matching process so that the resulting pressure matches are based on high-quality data and analysis representative of the reservoir. define the permeability values to be used for J-Function

by using the PERMJFUN keyword and setting the permeability direction to 'U' in the JFUNC or JFUNCR keywords. In the Define simulation case process in Petrel 2018.2 and later, you can supply a grid property as the J-Function permeability.
