MagnetismThe magnetic force exerted on a moving particle in a magnetic field is the cross product of the magnetic field and the velocity of the particle, multiplied by the charge of the particle. Because the magnetic force is perpendicular to the particle's velocity, this causes uniform circular motion. That motion can be explained by Magnetism | Science Bee(Physics) An inductor stores energy in its magnetic field; a capacitor stores energy in its electric field. The energy stored in an inductor is based on the current flowing through it; the energy stored in a capacitor is

based on the voltage across it. Inductors combine linearly in series; capacitors combine linearly in parallel. Electricity and Magnetism Questions | Shmoop Electricity and Magnetism Introduction.
