physics of multicharged ions has grown apace. In the fusion program, the spectra of these ions is an important diagnostic tool. Moreover the presence of multicharged ions presents a serious energy loss mechanism in fusion devices. This fact has motivated a program to study the collision mechanisms involved. Results of a preliminary study of the use of a model potential approach to the calculation of energy levels and radiative transition probabilities for highly ionized heavy atoms are reported. The calculations were carried out for eight ions in the sodium isoelectronic sequence from Mg II through W LXIV. The technique used involved the solution of the Dirac equation for the single outer valence ... Theoretical research in physics of highly ionized atoms ... The physics of highly ionized atoms is not only of extraordinary richness in specific physical phenomena but also a part of atomic physics that cross-correlates with many other scientific disciplines such as astrophysics, plasma physics, heavy ion physics, etc. Apart from its pure scientific importance, the LIFETIME MEASUREMENTS AND

STRUCTURAL STUDIES OF HIGHLY ... An atom is the smallest unit of ordinary matter that forms a chemical element. Every solid, liquid, gas, and plasma is composed of neutral or ionized atoms. Atoms are extremely small, typically around 100 picometers across. They are so small that accurately predicting their behavior using classical physics—as if they were tennis balls, for example—is not possible due to quantum effects.
