researchers commonly present pictures to their subjects, usually birds or monkeys, in order to infer how natural objects are perceived and conceptualised, or to discover the brain mechanisms underlying these abilities. Picture Perception in Animals | Taylor & Francis Group It is stressed that whether a stimulus can be regarded as a picture depends on both the nature of the stimulus and the nature of the observer; in addition the task which a subject is requested to perform is a crucial determinant in any assessment of pictorial perception. In consequence stimuli which are seen as pictures by some observers may appear to other observers as mere meaningless lines ...
