The amount of product generated by a chemical reaction is its actual yield, which is often less than the amount of product predicted by the stoichiometry of the balanced chemical equation representing the reaction (theoretical yield). 4:

### Questions &

Exercises Stoichiometry is the field of chemistry that is concerned with the relative quantities of reactants and products in chemical reactions.

For any balanced chemical reaction, whole numbers (coefficients) are used to show the quantities

(generally in moles ) of both the reactants and products. Reaction

Week 4 Kinetics - Part 1 Why?

Chemical kinetics is the study of the rates of chemical reactions; i.e., how fast reactants are converted into products. Experimentally determined rate law expressions show how the rate of a reaction depends upon the concentrations of the reactants and sometimes the products, too. This knowledge can be used to gain insight into the ... Chem116\_POGIL\_Week04\_003 -
