The year 2020 marks 100 years since Hermann Staudinger first published the concept of polymerization. Macromolecular Chemistry and Physics is celebrating this anniversary with a special article collection entitled "Polymers for the Future". Scientists from academia and industry provide their views on the opportunities offered by advanced polymer systems in technology, biomedicine, and sustainability. Polymers for the Future: Macromolecular Chemistry and Physics Polymers Polymers are long chain molecules that occur naturally in living things and can also be made by chemical processes in industry. Plastics are polymers, so polymers can be extremely useful. Addition polymers - Polymers - GCSE Chemistry (Single ... Fundamental Polymer Chemistry (15 credits) Module leader: Professor Steve Armes and Dr Sebastian Spain. This module introduces you the essential fundamentals of polymer structure, polymer synthesis and the chemical behaviours of polymers, both natural and synthetic. Topics covered include polymer microstructure, chain-reaction and step-reaction routes to polymers, living polymerizations, copolymerization, molecular weight distributions,
