Science and Technology 58(14):2408-2409 · December 2007 with 12 Reads
Radio frequency identification handbook for librarians
Radio-frequency identification (RFID) uses electromagnetic fields to automatically identify and track tags attached to objects. An RFID tag consists of a tiny radio transponder; a radio receiver and transmitter. When triggered by an electromagnetic interrogation pulse from a nearby RFID reader device, the tag transmits digital data, usually an identifying inventory number, back to the reader.
Radio-frequency identification - Wikipedia
The popularity of Radio Frequency Identification (RFID) technology has increased as its cost has decreased and the growth shows no signs of abating. Academic and public
