Find an expression for the drag force on the plate. Recall the transformation of variables in the Blasius problem:  $(x, z) \rightarrow (\eta, \nu)$  where  $\eta = \sqrt{U/\nu} x^{1/2} z$  and  $\nu = \nu z^2 / \nu$  and  $u = U f'(\eta)$ , where  $U$  is the velocity at the edge of the boundary layer and  $z$  is the coordinate normal to the plate. Fluid Mechanics Study Material - mae.nmsu.edu Preface. The following materials are provided as a study guide for the text Fluid Mechanics by Frank White. A brief summary of the key concepts and theory is presented for each chapter along with the final form of basic equations (without detailed derivations) used in the various analyses being presented. In most cases, a detailed explanation for the physical significance of each term in a fundamental governing equation is given (e.g., linear momentum, pg. III-8) to assist the student in ... Fluid mechanics is a branch of continuous mechanics, in which the kinematics and mechanical behavior of materials are modeled as a continuous mass rather than as discrete particles. The relation of fluid mechanics and continuous mechanics has been discussed by Bar-Meir (2008). In fluid mechanics, the continuous domain does not hold certain shapes and geometry like solids, and in many applications, the density of fluid varies with time and position.
