The Bronchial Circulation Lung Biology The bronchial circulation is the systemic vascular supply to the lung, and it supplies blood to conducting airways down to the level of the terminal bronchioles as well as nerves, lymph nodes, visceral pleura, and the walls of large pulmonary vessels. Within the airway wall, the circulation is composed of parallel vascular plexuses adjacent to airway smooth muscle. Bronchial Circulation - an overview | ScienceDirect Topics The bronchial circulation is the part of the circulatory system that supplies nutrients and oxygen to the cells that constitute the lungs, as well as carrying waste products away from them.
