Some intriguing new research results, [such as] on human and cat personalities, are presented in detail; part of this is previously unpublished. The

Domestic Cat - Cambridge Core Cats have lived outdoors for thousands of years. They are part of the natural landscape, and there are many biological and behavioral reasons why they are not a threat to other species. But opponents of Trap-Neuter-Return (TNR) still accuse outdoor cats of being responsible for the decline of birds or wildlife.

been a part of human life for thousands of years. Cats have been both worshipped and persecuted over this long period – either loved or hated for their enigmatic self-reliance. The Domestic Cat: The Biology of its Behaviour. The family Felidae, to which all living feline species belong, arose about ten to eleven million years ago. This family is divided into eight major phylogenetic lineages. The domestic cat is a member of the Felis lineage. A number of investigations have shown that all domestic varieties of cats come from a single species of the Felis lineage, *Felis catus*.

Variations of this lineage are found all over the world and up until recently scientists have had a hard time pinning down exactly which region. Evolution of the domesticated cat - Wikipedia.
