The evaluation of anthelmintics: Proceedings of the first ... Abstract. Gastrointestinal helminth infections remain a major constraint to livestock production globally. This study evaluated anthelmintic efficacy of 7 plants used as dewormers by farmers and pastoralists in Kenya. Thus 3 commercial anthelmintics and 7 plant preparations were tested in lambs infected with 5000 or 3000 L3 Haemonchus contortus in 4 experiments. Evaluation of anthelmintic properties of some plants used ... Abstract. A significant number of studies report growing resistance in nematodes thriving in both humans and livestock. This study was conducted to evaluate the in vitro and in vivo anthelmintic efficiency of Curcubita pepo (C. pepo) L. hot water extract (HWE), cold water extract (CWE) or ethanol extract (ETE) on two model nematodes: Caenorhabditis elegans (C. elegans) and Heligmosoides bakeri (H. bakeri). The selection of an appropriate anthelmintic depends on whether one is controlling or preventing Type I ostertagiasis (caused

by the establishment of adult worms derived from recently acquired infective larvae), preventing Type II (treating pre-Type II or inhibited larvae) or ... Anthelmintics - ScienceDirect Here the anthelmintic activity was assessed using earthworms because of their anatomical and physiological resemblance with that of the intestinal roundworm parasites of human being (Chatterjee, 1967, Kumar et al., 2010). They are widely used as effective tools for anthelmintic study because of their easy availability (Sangeetha et al., 2010). Normal saline water was used to wash all the worms and to remove all fecal matters. Evaluation of antibacterial and anthelmintic activities ... Methods of testing anthelmintics in sheep by worm egg counts, by critical and controlled tests and by measuring the productivity of treated sheep are briefly discussed. The objectives of evaluation in the field include testing in conditions under which the anthelmintic will be used to control helminthiasis. The evaluation of anthelmintics in sheep by field experiments. In the present study, Indian earthworms have been used for initial evaluation of anthelmintic activity, because of easy availability and their anatomical and physiological appearance with the intestinal roundworm parasites of human being 24. The results of preliminary phytochemical test showed the presence of various phytochemical compounds in the plants which are known to have various therapeutic importance in medical sciences. PHARMACOGNOSTICAL EVALUATION AND ANTHELMINTIC ACTIVITY OF ... Overall Anthelmintic Guidelines Two sections have been identified in the guidelines: general elements, and specific evaluation studies. The General Elements section includes: good clinical practice, evaluation

of effectiveness data, types of infection and parasite strains, product equivalence, recommendations for the VICH Topic GL7 The faecal egg count reduction test (FECRT) is the main method of detection of anthelmintic resistance (AR) in nematodes of veterinary importance. However, although the FECRT is standardised, the diagnostic performance of this method has not been fully characterised. Improving the detection of anthelmintic resistance ... The tests performed for screening the anthelmintic efficacy of herbal extracts are generally based on in vitro and in vivo methods already established by several workers. The in vitro tests have been used as preliminary studies using parasitic nematodes and offered a means of evaluating the anthelmintic activity of new plant compounds Tariq et al. .
